Cleaner Production Program

CSR (Corporate Social Responsibility) implemented by PT Astra Agro Lestari Tbk. in the field of environmental management.

The cleaner production program is carried out by utilizing the waste produced, namely non-hazardous solid waste in the form of empty bunches, kernel shells, fiber and liquid waste. Empty bunches are used as organic fertilizer for oil palm plants by being applied to land as mulch. Fiber and shell solid waste generated from palm oil processing is used as fuel in the palm oil mill owned by the Company. Liquid waste generated from the factory is also used as organic fertilizer by being applied to garden land with a flatebad or furrow system.

In several subsidiaries, namely PT Suryaindah Nusantarapagi (Central Kalimantan), PT Kimia Tirta Utama (Riau) and PT Karyanusa Ekadaya (East Kalimantan) a composting program has been carried out, namely tankos and other solid waste mixed with liquid waste then processed in an organic way to produce fertilizer compost. This program can generate added value for companies, including reducing the volume of anaerobic wastewater, thereby reducing the potential for methane gas to be wasted into environmental media, which is considered to be one of the contributors and triggers of global warming.
