As Simon admits, this resident of Petiro Village expressed his joy with the presence of PT SJA II Poso, especially in East Pamona District.

Initially when he planted oil palm, many residents cynically questioned it, starting from the planted oil palm, where to sell it, and various questions all doubted the success of his business.

"But over time, when my oil palm plants grew, PT SJA II started operating by planting oil palm and now a CPO factory has been established in this area, our plants are also harvested for the first time and are bought directly by the mill and now we can fulfill the economy. family from the palm oil harvest that we planted," said Simon to SultengTerkini.Com, Friday (28/4/2017).

Simon said, of the five hectares of oil palm planted, currently 240 trees have produced palm fruit, with an average weight of 15 kilograms per tree.

Range Rover Evoque - Oferta

Range Rover Evoque - Renting. Desde 350 €/Mes. Renting 36 meses. KM anuales: 15.000.

"We sell the results directly to the CPO factory owned by PT SJA II," he said.

In addition, according to other residents, they received a partnership scheme provided by PT SJA II, such as a loan for seeds without interest and was paid in installments after harvesting by paying 30 percent installments of the fruit sold to the factory.

From this partnership pattern, the company often brings in extension workers.

Even residents who plant independently also receive guidance from company counselors.

Simon added that the car he owns also receives oil palm fruit from the residents' harvest, so that he can get additional income from the wages for transporting the fruit to the factory.
