

[Ukrlandfarming](#) / Our company

About company

We believe that the world is an interconnected place. Ukrlandfarming's universe is our land where we grow grain, it is our animals that we feed the grain to, it is technology and knowledge. We have designed a highly efficient and safe production cycle, we support people's livelihoods and give them satisfaction from high-quality food products.

We farm thousands of hectares of Ukraine's fertile cropland, we are committed to promoting the country's agricultural sector. We work side by side with land owners, partners, suppliers,

public authorities, local communities and other organisations to strengthen Ukraine’s food security. Together we take good care of our land, implement innovations and help communities prosper.

We use equipment by the world’s top manufactures

We grow grain, produce eggs, milk and meat, and process them into various products for human and animal consumption. We supply our home market and export to more than 40 countries all over the globe.

We feed our animals with innovative feedstuffs that we produce ourselves. We dispose of waste in a responsible and environmentally sustainable manner while educating farmers on how to use farming waste as fertiliser.

We engage with local leaders to take good care of the communities where we operate.

We create new jobs in remote parts of Ukraine thereby achieving one of our goals as a good corporate citizen - to improve the livelihoods of as many people as we can.

We are an active member of several international business and industry associations.
