In the Donetsk village of Bezimenne, the wind park "Novoazovskiyi" was opened. The park's ten turbines are capable of providing light to the entire Novoazovsky district of the region with a population of almost 40,000 people. This was reported in the press service of the Donetsk Regional State Administration.

According to the press service, one wind unit produces more energy than the entire wind park of the old design. The cost of the wind power plant is almost two billion hryvnias, writes UNN (<http://unn.com.ua/ua/news/12-07-2011/414900/>) .

It is planned that 43 units with a total capacity of 107 megawatts should be operational in the Novazov steppe in two years. They will provide more energy than the 4 adjacent districts of Donetsk region: Telmanivskiyi, Novoazovskiyi, Pershotravnevyi and Volodarskyyi. That is, 2.5 wind farms will cover the needs of such a powerful consumer as

Mariupol. However, this will in no way affect electricity tariffs for local residents.

The Donetsk region is an ideal place for installing wind turbines that produce electricity. For example, the average wind speed in the steppe of the Novoazovsky District reaches 12 meters per second.
