Weineng Energy builds the largest solar photovoltaic island in Taiwan and contributes 1 kilowatt hour of every 25 kilowatt hours of green electricity in Taiwan.

Weineng Energy held the opening ceremony of Yunlin Xinxing Power Plant today, and invited distinguished guests such as President Tsai Ing-wen (4th from left) and Vice President of the Executive Yuan Zheng Wencan (3rd from right) to attend the ceremony.

Weineng Energy held the opening ceremony of the Yunlin Emerging Power Plant on World Earth Day today (22nd). President Tsai Ing-wen and Vice President of the Executive Yuan Zheng Wencan and other distinguished guests were invited to attend the ceremony. This emerging power plant is the largest solar photovoltaic island in Taiwan, occupying an area of 226 hectares and is built with 680,000 solar modules. The installation capacity reaches 272MW and the annual power generation reaches 400 million kilowatt-hours. It can provide household electricity for 90,000 users every year, which is the highest power generation capacity of a single project in Taiwan. After the Xinxing Power Plant is officially put into operation, during the peak power generation period, it is estimated that 1 kWh of every 25 kilowatt hours of green electricity in Taiwan will come from the Xinxing Power Plant, which will become a strong support for Taiwan's energy transformation.

At the opening ceremony of Yunlin Xinxing Power Plant, Nitin Apte, CEO of Weneng Energy Headquarters, said: "Taiwan is a key strategic market for renewable energy in the Asia-Pacific region, and Weneng Energy has taken Taiwan's 2050 net-zero carbon emission target as its own responsibility. I am very happy to see this Taiwan is making steady progress towards its energy transformation vision. As a developer with construction resources and performance, Weneng Energy will continue to develop a full range of sustainable energy projects in the future and become a powerful pillar in accelerating Taiwan's energy transformation."

It is mentioned in the report that Weineng Energy has

panels. It is built on foundation piles and adjusted according to the current sunshine conditions of Yunlin, which has the largest amount of sunshine in Taiwan. It is the first private enterprise in Taiwan to use double-sided power generation module technology to create both front and back power-generating solar panels. The average power generation power is higher than that of ordinary solar panels. An increase of 2% to 4% makes the power generation capacity unique in Taiwan and provides more stable green power.

Zheng Guangzhen, President of Weineng Energy Taiwan and South Korea, said: "Weineng Energy attaches great importance to the construction and maintenance safety of suppliers and employees. The entire Taiwan project site has achieved a safety management record of more than 2.5 million zero-disaster working hours. We will continue to do so in the future. We will develop all renewable energy with a rigorous attitude, and interact and communicate with local people in depth to create a friendly green energy case."

According to Weineng Energy, Yunlin Xinxing Power Plant is particularly focused on the balanced development of local sites, communities and the environment. During the peak period of construction, about 600 people were invested, 50% of whom were local residents of Yunlin, driving the local area with green energy industry Employment development; During the construction provided up to 2,121 hours of online and practical training.

Influence. Through multi-faceted management of industry, education, ecology and community, we are committed to adding environmental and humanistic value to every kilowatt-hour of green electricity.

Subsequently, Weineng Energy continued to implement the concept of sustainability and officially announced the launch of Taiwan's largest Yunlin Xinxing Solar Power Plant on Earth Day, aiming to implement environmentally sustainable development with clean energy. Leveraging its all-round renewable energy development capabilities, Weineng Energy will develop all-round clean energy sources such as composite sites, wind power, energy storage and solar energy in the future, and provide diversified and flexible green power solutions.
