

History

Today Agro-Region is a modern, high-tech and efficient company that has started its history in Soviet times, when in Boryspil district was created a number of enterprises focused on growing breeding animals, grains and vegetables, oriented on providing of food needs of the capital of Ukraine. To solve this problem, it was decided to combine big science and manufacturing. So at the Institute of Animal Breeding and Genetics, in Chubynskyi was created an experimental farm, which eventually became a national breeding plant "Oleksandrivka."

The 1990s became a period of restructuring of the entire agricultural sector of Ukraine. Old household connections were torn, and the new ones that meet the requirements of modern times were created instead. Within this process in 2002 in Velyka Oleksandrivka on the basis of several farms were established a breeding plant "Agro-Region" as a closed joint stock company.

In the mid 2000s, a rapid population growth in the world has led to food shortages and rising of prices. It was possible to solve those problems only due to the complete modernization and renovation of agricultural production, intensification and transition to new modern technologies. In particular, this concerned Ukraine, where the need for

investment in the agricultural sector was very sharp.

In 2007 Agro-region got new owners – the shareholders of the Swedish company East Capital that invest in Eastern Europe and the CIS. With the coming of East Capital, Agro-Region rapidly expands its land bank, attaches households in Zhytomyr, Chernihiv and Khmelnytsky regions.

In 2008-2009, the technical park of the company has been significantly upgraded, due to the purchase of modern European and American technology elevator and storage capacity are constructed and updates dairy complex.

In 2010-2012 Agro-Region focuses its efforts on improving production efficiency through new technologies and the latest scientific developments. The company starts cooperation with leading foreign companies that are leaders in various fields of agricultural business including: Monsanto, RAGT and Syngenta in seed production, BASF and Bayer in crop protection, etc.

Starting in 2013, special attention in Agro-Region is paid to the condition of soil. Each year, great funds are invested in improving of quality indicators. The result of the efforts made, became the industrial achievements of the company. Agro-Region becomes the best in terms of yield in different categories many times.

2014 became the best in the history of the company's yields: sunflower – 30 kg / ha (average for Ukraine – 19 kg / ha), winter wheat – 61 kg / ha (average for Ukraine – 40 kg / ha), soybeans – 25 kg / ha (average for Ukraine – 20 kg / ha), corn – 97 kg / ha, barley – 57 kg / ha, which has become the highest result in Ukraine.
