ANGLOGOLD ASHANTI IN GHANA

AngloGold Ashanti currently has two wholly owned and managed operations in Ghana – Obuasi and Iduapriem.

The operations are located in the Ashanti and Western Regions of Ghana, and were acquired following a merger between the former AngloGold Limited of South Africa and Ashanti Goldfields Company Limited of Ghana. The new entity, AngloGold Ashanti Limited, was formed in April 2004.

The **Iduapriem** mine, wholly owned by AngloGold Ashanti since September 2007, comprises the Iduapriem and Teberebie properties in a 110km² concession. Iduapriem is located in the Western Region of Ghana, some 70km north of the coastal city of Takoradi and 10km southwest of the Tarkwa mine. Iduapriem is an open-pit mine and its processing facilities include a carbon-in-pulp (CIP) plant.

Obuasi is located in the Ashanti Region of Ghana, approximately 60km south of Kumasi. Mining operations are primarily underground, to a depth of 1.5km. Some surface mining in the form of open pit and tailings reclamation occurs. Obuasi currently treats sulphide ores from underground at the south plant, following the decommissioning of the tailings treatment plant in October 2010. The south plant also treats sulphide tailings and has a capacity of 360,000 tonnes per month.
