

## Animal breeding

Our livestock farms are located in the villages of Vily, Pilipy-Borivsky, Hnatkiv, Palanka, Tymanivka.

Today they contain  more than 3,500 head of cattle, of which 1,500 are dairy cows. The average milk yield per forage cow is about 6 tons and there is a constant annual increase.

We have achieved the highest results on our farms, we have confirmed the status of a breeding plant, and we have passed the certification of our products as organic ones, according to European standards No. 834/2007 and No. 889/2008
