## CROP GROWING AND FEEDMILLING

Crop growing operations are fully integrated into Axzon's business:

- Axzon requires a lot of feed and vast areas to dispose waste
- Pig manure is an effective organic fertilizer

In total, Axzon cultivates more than 30 thousand hectares of land annually. We produce our own feed from the crops and we also use silage from our maize in our biogas production.

- In 2015 we harvested 30.700 hectares of land, divided in the categories in the diagram on the right
- The Group's land bank consists of 15,3K ha in Poland, 11,3K ha in Ukraine and 4,1 K ha in Russia, reaching more than 0,7 ha. pr. Sow full line.
- We use a modern, GPS-equipped machinery fleet to facilitate the crop growing
- We have 4 feed mills that fulfill the Group's internal needs both in Poland, Ukraine and Russia
- We keep a constant internal control over feed mix, price and quality of inputs which provides a huge competitive edge in the pig production
