Biofuels

We produce and market biodiesel and ethanol from a range of feedstocks.

North America

We offer blenders and refiners with a reliable source of high-grade ethanol to meet all blending requirements. We also provide services to investors and farmers looking to participate in this industry.

Europe

CFlow Biodiesel (sterol glucoside controlled biodiesel) offers the benefit of

- not blocking the systems in which it is used,
- flexibility because it can be mixed with other biodiesels, and
- reduction in both final total cost and contamination levels below 5ppm due to our distinctive filtering process that removes these components.

For more information contact goscemarketing@cargill.com.

Latin America

We are an investor in an entity that operates an ethanol dehydration facility in El Salvador with origination from Brazil. We distribute the anhydrous ethanol produced by this business. We also operate an ethanol terminal in Santos, Brazil, and two sugar cane mills and distilleries in Brazil.
