Brief introduction of agricultural science and technology cooperation project between Guangdong(China) and Philippine(2006-2008)

Brief introduction of agricultural science and technology cooperation project between Guangdong(China) and Philippine(2006-2008)

The implementation of Guangdong-Philippine agricultural science and technology cooperation project will help to explore an outward-oriented agricultural development paths, called "two resources and two markets", between China and Philippine. At the same time, it will improve the exchanges and cooperation in the political, cultural and economic fields of two countries. And ultimately realize objectives of mutual benefit and common development.

The main objects of this project is to take the advantages of the high agricultural scientific technology and products in Guangdong province, and build demonstrative bases of industrialized production and experiment for the main cash crops as sweet corn, tomato and hot pepper in Philippine. Improved varieties will be screened out to fit for the local environment. The corresponded integrated cultivation techniques will be developed and then trained to them. Step by step, the excellent varieties and other scientific and technical payoffs will be push into the market of South-east Asian countries. The smooth development of the project will also build a good foundation for the future cooperation with other countries in ASEAN on agricultural technology and industrialization aspects.

Main content of the project

1. Introduction and demonstration of new varieties, techniques and products: Build demonstrative bases of agricultural science and technology. Export the new varieties, techniques and products in our country and helps to improve them.

2. Development of new varieties and integrated techniques: With the experimental demonstrative base as the bond, the research institute, university and enterprise should combined together and make full use of local fine varieties resource and each other's advantages to research and develop new varieties and their key techniques of cultivation, fresh-keeping and processing, finally popularize and apply them.

3. Through the forward role of demonstration base, expand the radical demonstration area and

Location: Home > Cooperation

the application of new varieties, products and techniques. Build the technical consultation, information sharing and product marketing sales and service system, and gradually form an industrialized system in Philippine and Malaysia.

4. The exchange and training of persons facilitate the exchange visits between Guangdong province and ASEAN, carry out technical training of staff, strengthen the introduction, exchange and cultivation talented person, provide guarantees in terms of human resources for the promotion of level and quality of China-Philippine agricultural science and technology cooperation and its future development.
