Agriculture

In 2013 DARA Group and Chinese Agricultural Corporation HuanFan Qu have successfully implemented a joint project and created an agricultural product and dairy farm. In order to manage mutual assets within the project it was created "Chinese - Ukrainian Agricultural Company "FANDA".

Today CUAC "FANDA" includes 2000 head of dairy cattle and 4000 hectares of land under cultivation. Nevertheless the company does not rest on its laurels and during the next five years plans to increase the total head of livestock up to 8000, organize a horticultural complex and greenhouse complex for growing vegetables.

By implementing new technologies "Chinese - Ukrainian Agricultural Company "FANDA" intends to increase productivity and product quality by using more effective technologies fitting agricultural standards.
