EMERGY AS develops, operates, and owns large-scale onshore wind farms in selected growth markets in southeastern Europe where rising demand for renewable, CO<sub>2</sub> saving is supported by regulatory and financial support schemes. EMERGY will have ~600MW in production in Ukraine by the end of 2022. In addition, the company has ~800 MW under development in Serbia, and early phase projects in Greece and Romania. The company's goal is to have wind farms in operation producing 2GW by the end of 2025.

EMERGY has ambitious goals when it comes to their operations and ethically develops concepts to help local communities close to our assets that are seeking to utilize their resources. Our focus and understanding of CSR (Corporate Social Responsibility) and ESG (Environmental Social Governance) are instrumental in our projects and part of our DNA.

We work close with the communities close to our assets to make sure everyone is heard, and that we do the right assessments.

We focus on people.

On value creation.

On sustainability.

The use of wind power helps secure a better environment and a green future.

Wind farms enable people to reduce their dependency on traditional resources such as gas, oil and coal, which is conducive to the global fight against climate change.

That is how we are making Sustainable Stories. Every day!

NBT becomes Emergy!

### South-East Europe

Our strategy the coming years is to concentrate on South-East Europe. The geopolitical consequences of Europe erecting a new “green curtain” to countries that we champion would be significant. Especially in countries where energy is a geopolitical commodity and renewable energy is supported by the governments. The pressure to match the EU ambitions agenda is severe as most of their trade is conducted with Europe and taxation of . We want to use our expertise to bring renewable energy the countries we are working in, with a focus of making sustainable stories.

## Did you know this about wind?

In Greek mythology, the Anemoi were four wind gods, creating wind from the four compass points.
