Corporate Profile

Listed on the Singapore Exchange since 2007, First Resources is one of the fastest-growing palm oil producers in the Asia-Pacific. The Group has grown its plantation assets rapidly since its inception in 1992. We now manage more than 130,000 hectares of oil palms plantations and operate nine palm oil mills in Indonesia.

The Group's core business activities are cultivating oil palms, harvesting the fresh fruit bunches and milling them into crude palm oil ("CPO") and palm kernel for sale to the domestic and international markets. With our integrated processing facilities, we also refine part of our CPO production into higher value products such as olein and biodiesel.

First Resources' strong expertise in plantation cultivation and management is clearly reflected in its high yields, high extraction rates and low cost of production. We keep our operations closely integrated to extract maximum operational synergies.

The Group's disciplined approach to new plantings constantly rejuvenates its plantation profile. Our favourable age profile positions us well for sturdy operational growth over the next few years. With a sizeable reserve of unplanted land bank, the Group also has further room to expand its plantation footprint. We aim to enlarge our plantation hectareage and grow our CPO production to one million tonnes per annum.

Plantation Profile

(as at 31 December 2011)

Total Planted Area	132,251	hectares
Planted Nucleus Area	113,143	hectares
Planted Plasma Area	19,108	hectares
Weight average age of trees	8	years

Processing Capacity

(as at 31 December 2011)

Number of Palm Oil Mills	9	
Capacity Per Annum	3,240,000	tonnes of fresh fruits
Capacity Per Hour	540	tonnes of fresh fruits
