

Located 18kms south west of Kontagora, Niger State, Kaboji Farms strives to develop farming enterprises that produce products in a cost effective, sustainable and environmentally friendly manner. The farms meets market demands and supports the Groups' agro-industrial processing enterprises.

The Management of Kaboji Farms believes that sustained and dynamic agricultural growth initiatives such as those it has embarked on, will contribute to food security, sufficiency and help Nigeria realize its huge potential as an economic giant in Africa and beyond.

The 10,000 hectare Kaboji Farm, was initially established as a joint venture initiative between Northern Nigeria Flour Mills (NNFM) and Flour Mills of Nigeria (FMN) to provide maize for the NNFM maize mill in Kano. In 2008, FMN bought out NNFM, making Kaboji Farms Limited a 100% subsidiary of FMN with asset investments exceeding One Billion Naira.

Climate and topography

The climate is tropical, with high temperatures and good energy radiation all combining to impact favorably on crop production and yield.

Crops

The farm currently has 2,000 hectares of Maize and 1,000 hectares of Soya beans. Other cultivated crops are rice and cassava and it's also trialing the cultivation of new sugar cane varieties using drip irrigation.

Expansion

Kabouji Farms is on a major drive to increase the cultivated area further by 2,000 hectares over the next five years with an increased output projected at 7000mt. Flour Mills has recently established a Feed Mill in Ibadan expected to absorb most of this expansion.
