## Viet Nam jatropa project

[Share](#)

[Print](#)

### Overview

"Jatropha hedges thrive on sandy loams in Binh Thuan. In 2010, Eco-Carbone, through its 67% equity share within a joint venture under constitution, will support the establishment of 100 ha of jatropha plantations after farmer trainings and the supply of quality jatropha seedlings free of cost. Moreover, Eco-Carbone will set up a processing unit in the Bac Binh district aiming to press around 50 tons of jatropha grains in 2010.

Preliminary tests for castor production will also start in 2010.

The potential amount of land dedicated to the Joint Venture in this province will be at least 5,000 ha."

### Project Details
