

HLH Agriculture (Cambodia) Co., Ltd

Overview

As a company in Cambodia, HLH Agriculture would be highlighting its progress in the following slides.

The photos and descriptions would be highlighting the progress of HLH Agriculture.

This presentation shows phrase 1 of the overall plan in Cambodia.

The Start

The land taken over was surrounded by scrubs, bushes, weeds, rocks and trees.

The aim was to clear the land of such obstacles to prepare the land for plantation.

The Start

Roads were paved to allow the vehicles and machineries for the clearing of the land to begin.

Clearing of the land

The lands were cleared in the dry season.

A list of machineries were used to aid to the clearance of the land.

Machines Used for Land Clearance

This includes:

1. Excavators
2. Bulldozers
3. Backhoe loaders
4. Trucks
5. Tractors

The Cleared Land

These lands are cleared of vegetation and road are properly paved.

The Farm Base

This was before any of the construction has taken place.

This area of the land had been set aside for further development as a base.

Building of Living Quarters

Workers' quarters were built to house the workers.

The quarters included facilities like toilets, kitchen, dining area and a recreational room.

Building of Warehouse

The warehouse built has a land area of more than 6000 square metres. It would be used for storing dried cassava and corn.

Maintenance of Machineries

A designated shed and area have been built for maintenance and repair works. This ensure optimal efficiency of the machines in the field.

Machineries of Plantation

Combined Harvester

Boom Sprayer

Disc Plougher

Tooth Harrow

Display of Machineries

Mechanical Planter with Fertilizer Applicator

Plantation

The corn plantation that is current in the farm are now grown as follow.
