Lee County Waste to Energy Facility, USA

Lignol Innovations Ltd.

Your offsets provide funding for new projects that reduce greenhouse gas emissions. These are projects that, because of financial or technical barriers, would not and could not go forward without offset funding. Which means your offsets are making a real and measurable difference every time.

You can even choose what kind of project portfolio your offsets will support. You may want to invest in a portfolio that contains offset projects that support a specific project type; or a portfolio that includes offset projects certified to a particular standard; or a portfolio with offset projects in a specific country or region.

Project Portfolios

We've pooled a number of our projects into portfolios to manage risks and offer a standard, averaged price per tonne of carbon offsets. Offsetter's three portfolios consist of projects from BC, Canada and around the globe.

- Our General Portfolio is a mix of our own Canadian projects and international Voluntary Carbon Standard (VCS) credits.
- Our Gold Standard Portfolio is sourced from Gold Standard credits from around the world. The Gold Standard is an internationally accepted standard for offsets. Canadian projects are not eligible for this designation because of Canada's standing as a Kyoto signatory [and country already committed to decreasing our emissions].
- Our Synergy Portfolio is a collection of projects from British Columbia and Uganda that have been completed to various high quality standards. Each of the projects within this portfolio have benefits that extend beyond their climate benefits and into the communities they reside within.

For larger purchases with annual offset requirements exceeding 10,000 tonnes, we can even arrange custom-made portfolios or individual project purchases. Contact us for more informaiton.

Lower Zambezi REDD+

Luantang Hydro Power Project, China

Mai Ndombe REDD+

Mare Manastir Windfarm, Turkey

Piccadilly Terrance Retirement Residence

Quadra Island Forestland Conservation Project
