PT BIM PREPARES PLASMA LAND FOR LORI RESIDENTS

17 March 2012 Website Admin Article 1565

TANA PASER. Palm Oil Plantation Company PT. Borneo Indah Marjaya (BIM) ensured that the distribution of the plasma plantation allotment to local residents would not be a problem. Most recently, PT BIM has prepared 162 hectares of Plasma plantations which will soon be distributed to residents of Lori Village, Batu Engau District.

This certainty came after residents visited the BIM office facilitated by Commission II of the Paser DPRD to inquire about the distribution of the plasma allotted gardens. This is to prevent unwanted actions.

After meeting with the management of PT. BIM, finally the residents can breathe a sigh of relief knowing that their village will certainly get a share of plasma plantations from the company which owns 4000 hectares of plantation land.

Chairman of Commission II DPRD Paser H Abdullah accompanied by Deputy Chairman of Commission II DPRD Paser Muspandi who went directly to the field to facilitate the aspirations of the Lori village community, said that in fact this problem would not have arisen if there had been no miscommunication between village officials and residents.

Based on the company management's acknowledgment, the existing plasma plantations will be divided after verification from the Paser Agriculture and Plantation Service. To find out whether the plasma plantation is feasible or not, it is submitted to the community.

"Alhamdulillah, we have succeeded in solving the problem of plasma plantations that the residents of Lori village wanted. Actually the company has conveyed the reason why the plasma plantations have not been distributed to the head of Lori Village, but the person concerned has not yet conveyed to the residents at the hearing," said the Democratic Politician to the Kaltim Post.

Meanwhile, Muspandi added that his party has directly inspected the plasma plantations that will be distributed to Lori residents, and the conditions are very good, compared to plasma plantations owned by several other plantations.

"In yesterday's meeting we asked the residents to be patient, because the plasma plantations already exist. It only needs to be distributed after there is a verification from the Distanbun. Because to receive the allocation of plasma plantations, the community must form a cooperative. Because the management will use a one-stop management system," said Muspandi.

Separately, Budiono as Public Relations of PT. BIM confirmed that the existing plasma plantations would be distributed to the three villages in their working area after verification or assessment from the Director General of Plantations. "We want the gardens that we will distribute to the community of the same quality as the nucleus plantations. And if in the assessment later there is something that needs to be fixed, we will fix it as our commitment to the community," said Budiono.
