

SFID (Forest and Industrial Company of Doumé)

Rougier has been established in Cameroon since 1969 through its subsidiary SFID (Société Forestière et Industrielle de la Doumé) which today exploits 550,000 ha of forests for a production of around 200,000 m³ of logs / year. SFID employs over 1,000 people.

Forestry activities

Planning

In line with its voluntary responsible forest management policy, the group is implementing development plans for all of its concessions. They respond to three levels of commitment: preservation of the ecosystem and biodiversity, social development of workers and their families and respect for local populations and traditional forest customs.

The management plan is a real management tool that puts forest production in perspective over several years so that the samples taken do not affect the regeneration capacity of the forest (average harvest: from 1 to 2 trees per ha every 30 years).

Certification

In 2007, SFID obtained the TLTV-VLC legality and traceability certification issued by SGS on all of its forest concessions (in the South and East of the country). This label provides the guarantees requested by a growing number of customers (particularly in Europe and the United States) concerning the legal origin of timber and its traceability from the production forest to importing customers.

In March 2013, the eastern forest massif (around Mbang) successfully passed the FSC audit of good forest management.

In March 2014, the southern massif (around Djoum) successfully passed the FSC Controlled Wood audit.

Industrial activities

Mbang sawmill - East

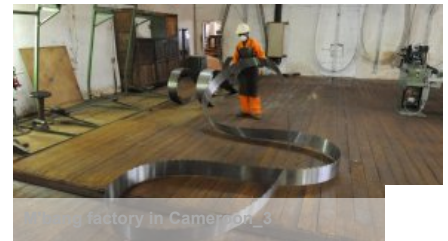

- Origin of the wood resource: Eastern forest massif
- Two sawing lines
- Annual production capacity of 35,000 m³ of planks
- Products: Dry or green planks, Standard and Fixed
- Drying capacity: 1,700 m³
- Main essences: Ayous, Sapelli, Fraké, etc.
- Distance from port of evacuation: 650 kilometers (road and / or train)
- FSC certification (FSC 100% and FSC Controlled Wood certified products)

Mbang secondary processing workshop - East

- Origin of the wood resource: Eastern forest massif
- Annual production capacity of 7,000 m³ of processed products
- Products: Decking, Joists, Triplis, Round Sticks, Solid Butt Products, Shutter Blades, etc.
- Main essences: Sapelli, Tali, Ayous, Okan, Fraké etc.
- Distance from port of evacuation: 650 kilometers (road and / or train)
- FSC certification (100% FSC and FSC Controlled Wood products)

Djoum sawmill - South

- Origin of the wood resource: southern forest massif
- 2 sawing lines
- Annual production capacity of 12,000 m³ of planks
- Products: Green planks, Standard and Fixed
- Main essences: Tali, Padouk, Movingui, Sapelli, Iroko, etc.
- Distance from evacuation port: 500 kilometers (road)
- FSC Controlled Wood certification
