Group’s land portfolio covers 22 Ukrainian provinces with most of the land being highly productive black soil. Total area under management is 654 thousand hectares. The Ukrlandfarming Group ranks among the top-ten cropland operators in the world and holds the largest stock of arable land in Ukraine.

Group’s farming land covers three climate zones (forest, wooded prairies, and prairies), which allows for higher efficiency when using agricultural equipment and mitigating weather risks.

The group’s land portfolio is divided into twelve working clusters based on geography, proximity to key infrastructure facilities, and the need to maintain a manageable size for the clusters.

### Facts

**654 th. ha** under management

The fertility of the Ukrainian black soils is comparable with that of the soils in the Amazon River Basin, however, the Ukrainian soil has a higher layer thickness (up to 1.5m).
